## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 12-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Sato et al U.S. patent no. 6,479,211 filed May 25, 2000. Sato is not overcome by applicant's perfected priority document having a date of 12/23/00.

In col. 104 Sato teaches polymers for a photoresist composition. Polymer 17 meets the limitations of claims 12 and 13. The polymer is used in example 1b in Table 4 with triphenylsulfonium triflate as the PAG to make a photoresist composition as in claim 14. The photoresist may have a solvent of a mixture of ethyl lactate and butyrolactone (col. 10, lines 58-67 to col. 11, lines 22-31). In col. 95, formula A Sato teaches the composition has a tertiary amine wherein the R groups are hydroxyalkyl groups. Thus, Sato anticipates the amine is an alkanolamine such as triethanolamine well known in the art.
